  Research Fellow, Centre for Law, Markets and Regulation, University of New South Wales Faculty of Law
The symposium focuses on the role of finance in the implementation of international environmental law. Finance is an indispensable part of environmental protection and regulation yet faces a number of conceptual and practical challenges. These include mobilization and distribution of funds, alignment with environmental objectives, governance and capacity building. Contributions across a diversity of environmental backgrounds are welcome in order to facilitate the sharing of knowledge and the benefit of comparative experience.
